### Question 51

You have the following Python method.

```
def create_resource (resource_name, kind, account_tier, location) :  
    parameters = CognitiveServicesAccount(sku=Sku(name=account_tier), kind=kind, location=location, proper=  
    result = cogSvcClient.accounts.create(resource_group_name, resource_name, parameters)
```

You need to deploy an Azure resource to the East US Azure region. The resource will be used to perform sentiment analysis.

How should you call the method?

- A. create\_resource("res1", "TextAnalytics", "Standard", "East US")
- B. create\_resource("res1", "ContentModerator", "S0", "eastus")
- C. create\_resource("res1", "ContentModerator", "Standard", "East US")
- D. create\_resource("res1", "TextAnalytics", "S0", "eastus")

## Question 52

**HOTSPOT** You plan to deploy a containerized version of an Azure Cognitive Services service that will be used for text analysis. You configure `https://contoso.cognitiveservices.azure.com` as the endpoint URI for the service, and you pull the latest version of the Text Analytics Sentiment Analysis container. You need to run the container on an Azure virtual machine by using Docker. How should you complete the command? To answer, select the appropriate options in the answer area. **NOTE:** Each correct selection is worth one point.

Hot Area:

### Answer Area

```
docker run --rm -it -p 5000:5000 --memory 8g --cpus 1 \
```

### Question 53

You are building a chatbot by using Microsoft Bot Framework  
Composer.

You need to configure the chatbot to present a list of available options.  
The solution must ensure that an image is provided for each option.

Which two features should you use? Each correct answer presents part  
of the solution.

NOTE: Each correct selection is worth one point.

- A. an entity
- B. an Azure function
- C. an utterance
- D. an adaptive card
- E. a dialog

## Question 54

HOTSPOT

You plan to provision Azure Cognitive Services resources by using the following method.

You need to create a Standard tier resource that will convert scanned receipts into text.

```
static void provision_resource(CognitiveServicesManagementClient client, string name, string kind, string tier, string location)
{
    CognitiveServicesAccount parameters =
        new CognitiveServicesAccount(null, null, kind, location, name,
            new CognitiveServicesAccountProperties(), new Sku(tier));
    result = client.Accounts.Create(resource_group_name, tier, parameters);
}
```

How should you call the method? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer Area

provision\_resource("res1",

ComputerVision  
CustomVision.Prediction  
CustomVision.Training  
FormRecognizer

"eastus", "S1")  
"useast", "S1")  
"S0", "eastus")  
"S0", "useast")

## Question 55

You deploy a web app that is used as a management portal for indexing in Azure Cognitive Search. The app is configured to use the primary admin key.

During a security review, you discover unauthorized changes to the search index. You suspect that the primary access key is compromised. You need to prevent unauthorized access to the index management endpoint. The solution must minimize downtime.

What should you do next?

- A.** Regenerate the primary admin key, change the app to use the secondary admin key, and then regenerate the secondary admin key.
- B.** Change the app to use a query key, and then regenerate the primary admin key and the secondary admin key.
- C.** Regenerate the secondary admin key, change the app to use the secondary admin key, and then regenerate the primary key.
- D.** Add a new query key, change the app to use the new query key, and then delete all the unused query keys.

Hide Answer

Mark Question: ☐

**Answer:**

A

Regenerate admin keys.

Two admin keys are created for each service so that you can rotate a primary key, using the secondary key for business continuity.

1. In the Settings > Keys page, copy the secondary key.
2. For all applications, update the API key settings to use the secondary key.
3. Regenerate the primary key.
4. Update all applications to use the new primary key.

Note: Two admin api-keys, referred to as primary and secondary keys in the portal, are automatically generated when the service is created and can be individually regenerated on demand. Having two keys allows you to roll over one key while using the second key for continued access to the service.

## Question 56

### HOTSPOT

In Azure OpenAI Studio, you are prototyping a chatbot by using Chat playground.

You need to configure the chatbot to meet the following requirements:

Reduce the repetition of words in conversations.

Reduce the randomness of each response.

Which two parameters should you modify? To answer, select the appropriate parameters in the answer area.

NOTE: Each correct answer is worth one point.

### Question 58

You have the following C# method for creating Azure Cognitive Services resources programmatically.

```
static void create_resource(CognitiveServicesManagementClient client, string resource_name, string kind, string account_tier, string location)
{
    CognitiveServicesAccount parameters =
        new CognitiveServicesAccount(null, null, kind, location, resource_name, new CognitiveServicesAccountProperties(), new Sku(account_tier));
    var result = client.Accounts.Create(resource_group_name, account_tier, parameters);
}
```

You need to call the method to create a free Azure resource in the West US Azure region. The resource will be used to generate captions of images automatically.

Which code should you use?

- A. `create_resource(client, "res1", "ComputerVision", "F0", "westus")`
- B. `create_resource(client, "res1", "CustomVision.Prediction", "F0", "westus")`
- C. `create_resource(client, "res1", "ComputerVision", "S0", "westus")`
- D. `create_resource(client, "res1", "CustomVision.Prediction", "S0", "westus")`

Hide Answer

Mark Question: ☐

### Answer:

B

Many of the Cognitive Services have a free tier you can use to try the service. To use the free tier, use F0 as the SKU for your resource. There are two tiers of keys for the Custom Vision service. You can sign up for a F0 (free) or S0 (standard) subscription through the Azure portal. Incorrect Answers:

A: There is no free tier (F0) for ComputerVision.

### Question 59

You need to develop an extract solution for the receipt images. The solution must meet the document processing requirements and the technical requirements.

You upload the receipt images to the Form Recognizer API for analysis, and the API returns the following JSON.

```
"documentResults": [
  {
    "docType": "prebuilt:receipt",
    "pageRange": [
      1,
      1
    ],
    "fields": {
      "ReceiptType": {
        "type": "string",
        "valueString": "Itemized",
        "confidence": 0.672
      },
      "MerchantName": {
        "type": "string",
        "valueString": "Tailwind",
        "text": "Tailwind",
        "boundingBox": [],
        "page": 1,
        "confidence": 0.913,
        "elements": [
          "#/readResults/0/lines/0/words/0"
        ]
      }
    },
    ...
  },
  ...
]
```

Which expression should you use to trigger a manual review of the extracted information by a member of the Consultant-Bookkeeper group?

- A. `documentResults.docType == "prebuilt:receipt"`
- B. `documentResults.fields.*.confidence < 0.7`
- C. `documentResults.fields.ReceiptType.confidence > 0.7`
- D. `documentResults.fields.MerchantName.confidence < 0.7`

Hide Answer

Mark Question: ☐

Answer:

D

Need to specify the field name, and then use < 0.7 to handle trigger if confidence score is less than 70%.

Scenario:

AI solution responses must have a confidence score that is equal to or greater than 70 percent.

When the response confidence score of an AI response is lower than 70 percent the response must be improved by human input.

### Question 60

HOTSPOT You are building a chatbot for a Microsoft Teams channel by using the Microsoft Bot Framework SDK. The chatbot will use the following code.

```
protected override async Task OnMembersAddedAsync(IList<ChannelAccount>
membersAdded, ITurnContext<IConversationUpdateActivity> turnContext,
CancellationToken cancellationToken)
{
    foreach (var member in membersAdded)
        if (member.Id != turnContext.Activity.Recipient.Id)
            await turnContext.SendActivityAsync($"Hi there - {member.N
{WelcomeMessage}", cancellationToken: cancellationToken);
}
```

For each of the following statements, select Yes if the statement is true.

Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

#### Answer Area

| Statements                                                                                                    | Yes                   |
|---------------------------------------------------------------------------------------------------------------|-----------------------|
| OnMembersAddedAsync will be triggered when a user joins the conversation.                                     | <input type="radio"/> |
| When a new user joins the conversation, the existing users in the conversation will see the chatbot greeting. | <input type="radio"/> |
| OnMembersAddedAsync will be initialized when a user sends a message.                                          | <input type="radio"/> |

Hide Answer

Mark Question: ☐

Answer:

## Answer Area

### Statements

Yes

`OnMembersAddedAsync` will be triggered when a user joins the conversation.

☒

When a new user joins the conversation, the existing users in the conversation will see the chatbot greeting.

☒

`OnMembersAddedAsync` will be initialized when a user sends a message.

☐

Box 1: Yes -

The `ActivityHandler.OnMembersAddedAsync` method overrides this in a derived class to provide logic for when members other than the bot join the conversation, such as your bot's welcome logic.

Box 2: Yes -

`membersAdded` is a list of all the members added to the conversation, as described by the conversation update activity.

Box 3: No -

Reference:

<https://docs.microsoft.com/en-us/dotnet/api/microsoft.bot.builder.activityhandler.onmembersaddedasync?view=botbuilder-dotnet-stable>
