Question 71

You have a Speech resource and a bot that was built by using the Microsoft Bot Framework Composer.

You need to add support for speech-based channels to the bot.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- ☒ A. Configure the language and voice settings for the Speech resource.
- ☐ B. Add the endpoint and key of the Speech resource to the bot.
- ☐ C. Add language understanding to dialogs.
- ☐ D. Add Orchestrator to the bot.
- ☒ E. Add Speech to the bot responses.
- ☒ F. Remove the setSpeak configuration.

Question 72

You are building an internet-based training solution. The solution requires that a user's camera and microphone remain enabled.

You need to monitor a video stream of the user and verify that the user is alone and is not collaborating with another user. The solution must minimize development effort.

What should you include in the solution?

A. speech-to-text in the Azure AI Speech service

C. Spatial Analysis in Azure AI Vision

D. object detection in Azure AI Custom Vision

Question 73

You create a bot by using the Microsoft Bot Framework SDK.

You need to configure the bot to respond to events by using custom text responses.

What should you use?

A. a dialog

B. an activity handler

C. an adaptive card

D. a skill

Question 74

HOTSPOT

You develop a test method to verify the results retrieved from a call to the Computer Vision API. The call is used to analyze the existence of company logos in images. The call returns a collection of brands named brands.

You have the following code segment.

```
foreach (var brand in brands)
{
    if (brand.Confidence >= .75)
        Console.WriteLine($"Logo of {brand.Name} between {brand.Rectangle.X}, {brand.Rectangle.Y} and {brand.Rectangle.W} {brand.Rectangle.H}");
}
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The code will display the name of each detected brand with a confidence equal to or higher than 75 percent.	☐	☐
The code will display coordinates for the top-left corner of the rectangle that contains the brand logo of the displayed brands.	☐	☐
The code will display coordinates for the bottom-right corner of the rectangle that contains the brand logo of the displayed brands.	☐	☐

Hide Answer

Question 75

You need to upload speech samples to a Speech Studio project for use in training.

How should you upload the samples?

- A. Combine the speech samples into a single audio file in the .wma format and upload the file.
- B. Upload a .zip file that contains a collection of audio files in the .wav format and a corresponding text transcript file.
- C. Upload individual audio files in the FLAC format and manually upload a corresponding transcript in Microsoft Word format.
- D. Upload individual audio files in the .wma format.

Hide Answer

Mark Question: ☐

Answer:

B

To upload your data, navigate to the Speech Studio . From the portal, click Upload data to launch the wizard and create your first dataset. You'll be asked to select a speech data type for your dataset, before allowing you to upload your data.

The default audio streaming format is WAV

Use this table to ensure that your audio files are formatted correctly for use with Custom Speech:

Property	Value
File format	RIFF (WAV)
Sample rate	8,000 Hz or 16,000 Hz
Channels	1 (mono)
Maximum length per audio	2 hours
Sample format	PCM, 16-bit
Archive format	.zip
Maximum archive size	2 GB

Question 76

SIMULATION You need to configure bot12345678 support the French (FR-FR) language.

Export the bot to C:\Resources\Bot\Bot1.zip.

To complete this task, use the Microsoft Bot Framework Composer.

Hide Answer

Mark Question: ☐

Answer:

.

Step 1: Open Microsoft Bot Framework Composer

Step 2: Select the bot bot12345678

Step 3: Select Configure.

Step 4: Select the Azure Language Understanding tab

Step 5: Select the Set up Language Understanding button. The Set up Language Understanding window will appear, shown below:

Set up Language Understanding ×

To understand natural language input and direct the conversation flow, your bot needs a language understanding service. [Learn more](#)

- ☒ Use existing resources
- ☐ Create and configure new Azure resources
- ☐ Generate instructions for Azure administrator

Next

Cancel

Step 6: Select Use existing resources and then select Next at the bottom of the window.

Step 7: Now select the Azure directory, Azure subscription, and Language Understanding resource name (French).

Step 8: Select Next on the bottom. Your Key and Region will appear on the next on the next window, shown below:

Select Language Understanding resources ×

The following Language Understanding keys have been successfully added to your bot project:

Key	
Region	

Done

Step 9. Select Done -

Question 77

You successfully run the following HTTP request.

POST https://management.azure.com/subscriptions/18c51a87-3a69-47a8-aedc-a54745f708a1/resourceGroups/RG1/providers/Microsoft.CognitiveServices/accounts/contoso1/regenerateKey?api-version=2017-04-18

Body{keyName: Key2}

What is the result of the request?

- A. A key for Azure Cognitive Services was generated in Azure Key Vault.
- B. A new query key was generated.
- C. The primary subscription key and the secondary subscription key were rotated.
- D. The secondary subscription key was reset.

Hide Answer

Mark Question: ☐

Answer:

B

Accounts - Regenerate Key regenerates the specified account key for the specified Cognitive Services account.

Syntax:

POST

https://management.azure.com/subscriptions/{subscriptionId}/resourceGroups/{resourceGroupName}/providers/{accountName}/regenerateKey?api-version=2017-04-18

Reference:

https://docs.microsoft.com/en-us/rest/api/cognitiveservices/accountmanagement/accounts/regeneratekey

Question 78

HOTSPOT You are developing an application to recognize employees' faces by using the Face Recognition API. Images of the faces will be accessible from a URI endpoint.

The application has the following code.

```
def add_face(subscription_key, person_group_id, person_id, image_uri):
    headers = {
        'Content-Type': 'application/json',
        'Ocp-Apim-Subscription-Key': subscription_key
    }
    body = {
        'url': image_uri }
    conn = httplib.HTTPSConnection('westus.api.cognitive.microsoft.com')
    conn.request('POST',
f'/face/v1.0/persongroups/{person_group_id}/persons/{person_id}/persistedFaces', f'{body}', header:
    response = conn.getresponse()
    response_data = response.read()
```

For each of the following statements, select Yes if the statement is true.

Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes

No

The code will add a face image to a person object in a person group.

☐
☐

The code will work for up to 10,000 people.

☐
☐

add_face can be called multiple times to add multiple face images to a person object.

☐
☐

Question 79

You are developing the knowledgebase by using Azure Cognitive Search.

You need to meet the knowledgebase requirements for searching equivalent terms.

What should you include in the solution?

A. synonym map

B. a suggester

C. a custom analyzer

D. a built-in key phrase extraction skill

Hide Answer

Mark Question: ☐

Answer:

A

Within a search service, synonym maps are a global resource that associate equivalent terms, expanding the scope of a query without the user having to actually provide the term. For example, assuming dog, canine, and puppy are mapped synonyms, a query on canine will match on a document containing dog.

Create synonyms: A synonym map is an asset that can be created once and used by many indexes.

Question 80

SIMULATION You plan to create a solution to generate captions for images that will be read from Azure Blob Storage.

You need to create a service in Azure Cognitive Services for the solution. The service must be named captions12345678 and must use the Free pricing tier.

To complete this task, sign in to the Azure portal.

Hide Answer

Mark Question: ☐

Answer:

Part 1: Create a search service captions12345678

Step 1: Sign in to the QnA portal.

Step 2: Create an Azure Cognitive multi-service resource:

Step 3: On the Create page, provide the following information.

Name: captions12345678

Pricing tier: Free -

Create Cognitive Services ...
