Question 81

You plan to perform predictive maintenance.

You collect IoT sensor data from 100 industrial machines for a year. Each machine has 50 different sensors that generate data at one-minute intervals. In total, you have 5,000 time series datasets.

You need to identify unusual values in each time series to help predict machinery failures.

Which Azure service should you use?

A. Anomaly Detector

B. Cognitive Search

C. Form Recognizer

D. Custom Vision

Question 82

You are building a bot by using Microsoft Bot Framework.

You need to configure the bot to respond to spoken requests. The solution must minimize development effort.

What should you do?

- A.** Deploy the bot to Azure and register the bot with a Direct Line Speech channel.
- B.** Integrate the bot with Cortana by using the Bot Framework SDK.
- C.** Create an Azure function that will call the Speech service and connect the bot to the function.
- D.** Deploy the bot to Azure and register the bot with a Microsoft Teams channel.

Question 83

You have the following data sources:

Finance: On-premises Microsoft SQL Server database

Sales: Azure Cosmos DB using the Core (SQL) API

Logs: Azure Table storage

HR: Azure SQL database

You need to ensure that you can search all the data by using the Azure Cognitive Search REST API.

What should you do?

- A.** Migrate the data in HR to Azure Blob storage.
- B.** Migrate the data in HR to the on-premises SQL server.
- C.** Export the data in Finance to Azure Data Lake Storage.
- D.** Ingest the data in Logs into Azure Sentinel.

Hide Answer

Mark Question: ☐

Answer:

C

In Azure Cognitive Search, a data source is used with indexers, providing the connection information for ad hoc or scheduled data refresh of a target index, pulling data from supported Azure data sources.

Note: Supported data sources -

Indexers crawl data stores on Azure and outside of Azure.

Amazon Redshift (in preview)

Azure Blob Storage -

Azure Cosmos DB -

Azure Data Lake Storage Gen2 -

Azure MySQL (in preview)

Azure SQL Database -

Azure Table Storage -

Elasticsearch (in preview)

PostgreSQL (in preview)

Salesforce Objects (in preview)

Salesforce Reports (in preview)

Smartsheet (in preview)

Snowflake (in preview)

Azure SQL Managed Instance -

SQL Server on Azure Virtual Machines

Azure Files (in preview)

Question 84

You are building a solution that will detect anomalies in sensor data from the previous 24 hours.

You need to ensure that the solution scans the entire dataset, at the same time, for anomalies.

Which type of detection should you use?

A. batch

B. streaming

C. change points

Question 85

HOTSPOT

You are building an app that will share user images.

You need to configure the app to meet the following requirements:

Uploaded images must be scanned and any text must be extracted from the images.

Extracted text must be analyzed for the presence of profane language.

The solution must minimize development effort.

What should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Text extraction:

Azure AI Language

Azure AI Computer Vision

Content Moderator

Azure AI Custom Vision

Azure AI Document Intelligence

Profane language detection:

Azure AI Language

Azure AI Computer Vision

Content Moderator

Azure AI Custom Vision

Azure AI Document Intelligence

Question 86

DRAG DROP

You develop an app in C# named App1 that performs speech-to-speech translation.

You need to configure App1 to translate English to German.

How should you complete the SpeechTranslationConfig object? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Values

addTargetLanguage

speechSynthesisLanguage

speechRecognitionLanguage

voiceName

Answer Area

```
var translationConfig = SpeechTranslationConfig.FromSubscription(SPEECH__SUBSCRIPTION__KEY, SPEECH__SERV  
translationConfig. = "en-US";  
translationConfig. ("de");
```

Hide Answer

Mark Question: ☐

Answer:

Answer Area

```
var translationConfig = SpeechTranslationConfig.FromSubscription(SPEECH__SUBSCRIPTION__KEY, SPEECH__SERVICE__REGION);  
translationConfig. speechRecognitionLanguage = "en-US";  
translationConfig. speechSynthesisLanguage ("de");
```

Question 87

You build a Conversational Language Understanding model by using the Language Services portal.

You export the model as a JSON file as shown in the following sample.

```
{
  "text": "average amount of rain by month at chicago last year",
  "intent": "Weather.CheckWeatherValue",
  "entities": [
    {
      "entity": "Weather.WeatherRange",
      "startPos": 0,
      "endPos": 6,
      "children": []
    },
    {
      "entity": "Weather.WeatherCondition",
      "startPos": 18,
      "endPos": 21,
      "children": []
    },
    {
      "entity": "Weather.Historic",
      "startPos": 23,
      "endPos": 30,
      "children": []
    }
  ]
}
```

To what does the Weather.Historic entity correspond in the utterance?

A. by month

B. chicago

C. rain

D. location

Question 88

HOTSPOT You are developing an internet-based training solution for remote learners.

Your company identifies that during the training, some learners leave their desk for long periods or become distracted.

You need to use a video and audio feed from each learner's computer to detect whether the learner is present and paying attention. The solution must minimize development effort and identify each learner. Which Azure Cognitive Services service should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

From a learner's video feed, verify whether the learner is present:

	▼
Face	
Speech	
Text Analytics	

From a learner's facial expression in the video feed, verify whether the learner is paying attention:

	▼
Face	
Speech	
Text Analytics	

From a learner's audio feed, detect whether the learner is talking:

	▼
Face	
Speech	
Text Analytics	

Hide Answer

Mark Question: ☐

Answer:

Answer Area

From a learner's video feed, verify whether the learner is present:

▼
Face
Speech
Text Analytics

From a learner's facial expression in the video feed, verify whether the learner is paying attention:

▼
Face
Speech
Text Analytics

From a learner's audio feed, detect whether the learner is talking:

▼
Face
Speech
Text Analytics

Question 89

HOTSPOT

You have an Azure subscription that contains an Azure OpenAI resource named AI1.

You plan to develop a console app that will answer user questions.

You need to call AI1 and output the results to the console.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
openai.api_key = key
openai.api_base = endpoint
response = 
    openai.ChatCompletion.create
    openai.Embedding.create
    openai.Image.create

engine=deployment_name,
prompt="What is Microsoft Azure?"
)
print 
    (response.choices[0].text)
    (response.id)
    (response.text)
```

Hide Answer

Mark Question: ☐

Answer:

Question 90

You have a 20-GB video file named File1.avi that is stored on a local drive.

You need to index File1.avi by using the Azure Video Indexer website.

What should you do first?

- A. Upload File1.avi to an Azure Storage queue.
- B. Upload File1.avi to the Azure Video Indexer website.
- C. Upload File1.avi to Microsoft OneDrive.
- D. Upload File1.avi to the www.youtube.com webpage.
